

The most complete on the market

Two therapies and seven treatment modes: all in one module, Modula CarbioX offers all the possibilities on the market. The double delivery allows you to operate both with carbon dioxide and with oxygen and there are a total of seven different treatments available, making it a complete instrument designed for maximum customer satisfaction.

CEA - Carboxytherapy Enhanced Assisted

This new method, created after a collaboration between professionals of AIME (Italian Society of Aesthetic Medicine) and as part of the 2nd level Master's degree in Aesthetic Medicine at the University of Rome "Tor Vergata", allows for a greater diffusibility of CO₂, with an immediate analgesic effect for the patient and halving the delivery time for each therapy session.

Maximum efficacy, zero hassle

The reliable and gradual flow delivery allows the patient to undergo painless treatments. Modula Modular System CarbioX presents, in fact, an advanced gas management system which allows for controlled increases and decreases of the flow. In this way, the patient will be able to undergo safer and more reliable treatments in total comfort.

No more coldness under the skin

With Modula you can offer your patients maximum comfort. Thanks to Gtc Gas Temperature Control, the system heats the carbon dioxide delivered eliminating the unpleasant cold feeling under the skin, making the treatment more pleasant.

Modularity and convenience

If you choose Modula, you will always have more opportunities. Its modular concept will allow you to combine several technologies to multiply the results. In the case of anti-cellulite treatment, for example, you can combine the benefits of carboxytherapy with the lifting effect of radiofrequency or with the invigorating effect of acoustic waves. And you will be able to offer your patients more complete and affordable packages.

All parameters under control

With TVC Total Volume Control, the gas volume and flow are clearly visible in real time on the Modula' user-friendly interface and you can constantly monitor all the treatment parameters.

For your comfort

Wavemed has studied every detail to facilitate your work. You will be able to easily hook on the tank-holder trolley supplied and thus eliminate any superfluous encumbrance.

CARBIOX

General

EAC - Enhanced Assisted Carboxytherapy
GTC - Gas Temperature Control
Display Touch Screen 10.4"

Power supply	110 - 240VAC 50-60Hz
Device type	BF
Insulation class	I
Medical device	Class IIb - CE 1936
Casing	ABS flame retardant
Fuses	2 x T4A 250V
Input gas	CO ₂ + O ₂ (carboxytherapy + oxygen therapy)
Input pressure	3.0 ± 0.5 bar
Flow	From 5 ml/min to 550 cc/min
Treatment time	From 1 to 99 minutes
Connectivity	Wifi , LAN, USB
VTC	Total volume control
PIC	Input pressure control
POC	Output pressure control
Dimensions l x h x d	400 x 310 x 230 mm
Weight	7.5 Kg
Accuracy of the values indicated	± 20%
