

ENDOMED 684V & 682V

The Endomed is a versatile and highly advanced piece of equipment for electrotherapy. The Endomed has sixteen different types of current. These current types have shown to be effective in the fight against pain, the restoration of tissue and the stimulation of muscles.

The Endomed 684V has four channels. The channels can be set independently and are fully galvanically isolated (extremely safe). With the aid of four channels, the various parts of a muscle can be selectively stimulated or a number of muscles can be stimulated at the same time. In addition, with four channels it is possible to apply local and segmental applications with various types of current. This allows maximum results in pain reduction and stimulation to be reached.

The Endomed 682V has two separate channels as standard. This means that you can apply all the above types of current per channel at various locations. Thus there is the possibility of working with different current types for local and segmental applications: You can for example select bipolar interferential on one channel and use a TENS current type on the other channel.

- Electrotherapy with up to 16 different current forms over 2 completely separated channels.
- Unsurpassed comfort, all treatment setting can be adjusted during the treatment with only one hand!
- A visual wizard helps you to determine the correct settings for virtually all diseases that can be treated with this device
- Available with an integrated vacuum unit for a simple application of electrotherapy with vacuum electrodes.
- Simple, stylish and easy to use!

ELECTROTHERAPY

Equipment for pain management, muscle stimulation and/or diagnostics. Electrotherapy applications for fast pain relief without side effects. Muscles can be stimulated to improve the function of soft tissue. Electrotherapy can be used to measure differentiated tissue response to stimulation, to provide a diagnosis about tissue quality.
